

Setting up Parental Controls

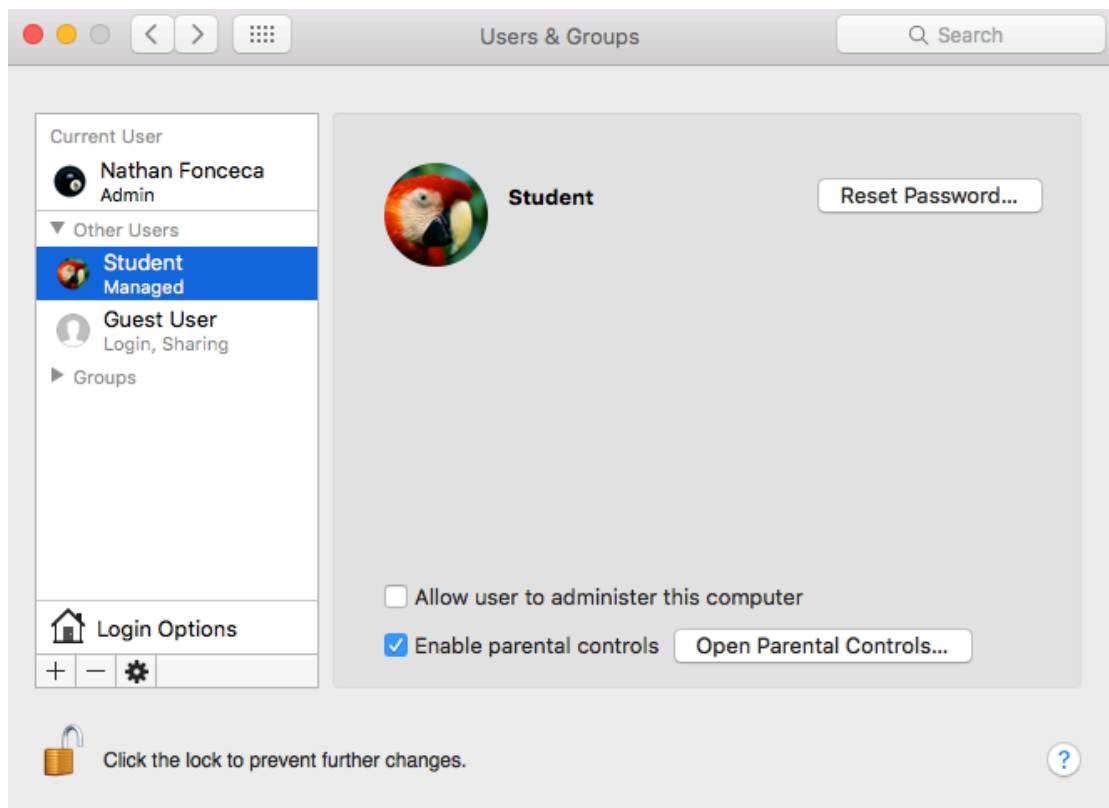

Before you go through the below configurations you will need to login as your Parent account which you created during the initial setup of the macbook.

1: Open up System Preferences from the start menu and click on “Users and Groups”

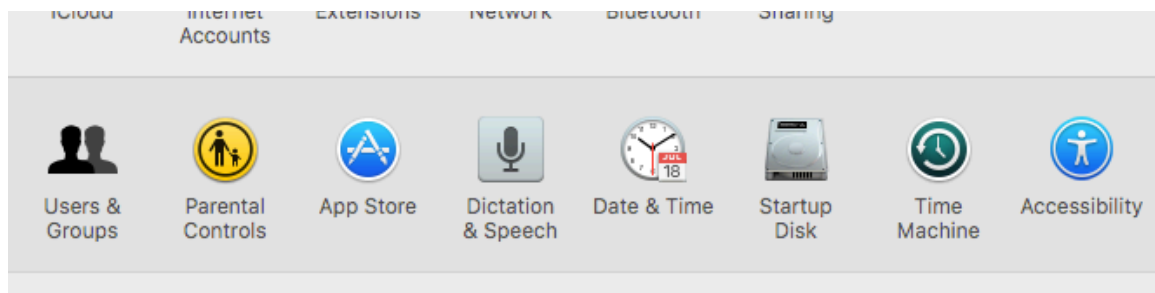

2: Once you are in users and groups you will need unlock the settings in the bottom left corner.

3: Select your child's account in the list and then de-select "Allow user to administer this computer". Then select "Enable parental controls"

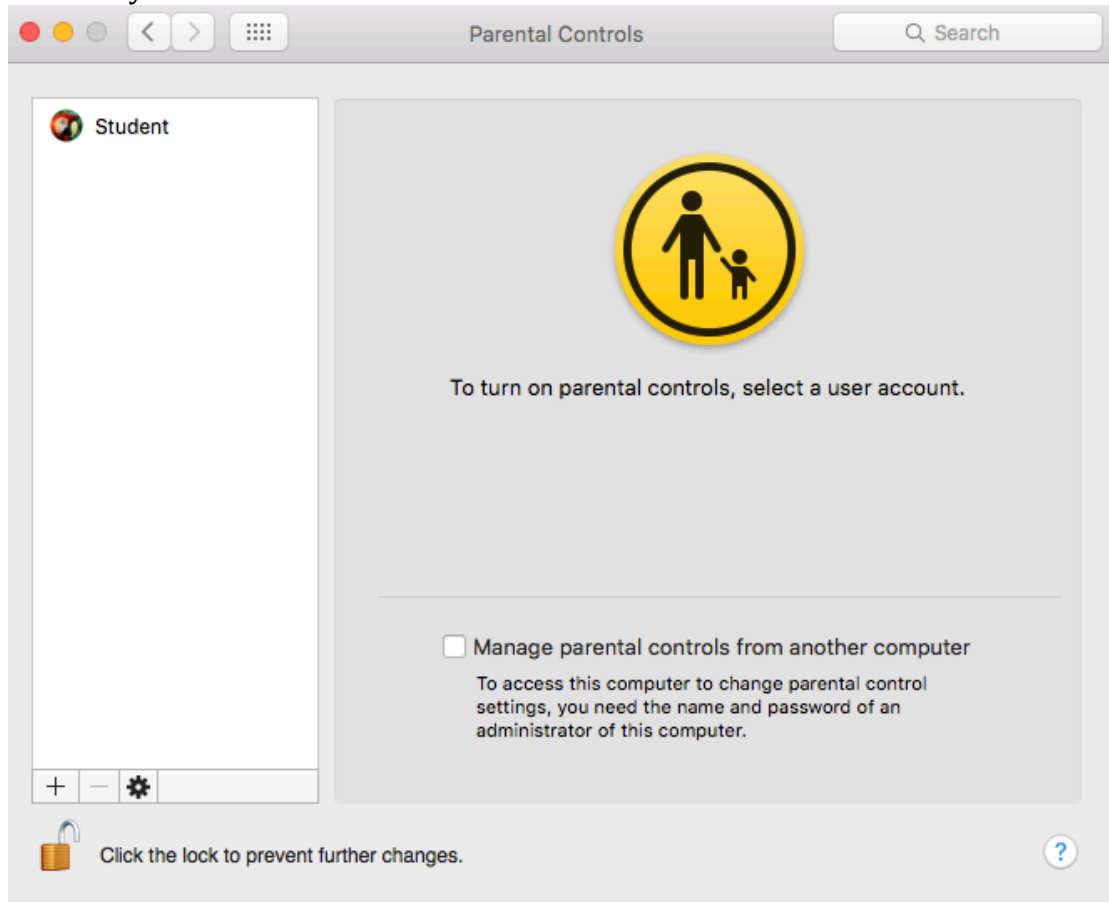

4: Restart your computer and log back in with your parent account.

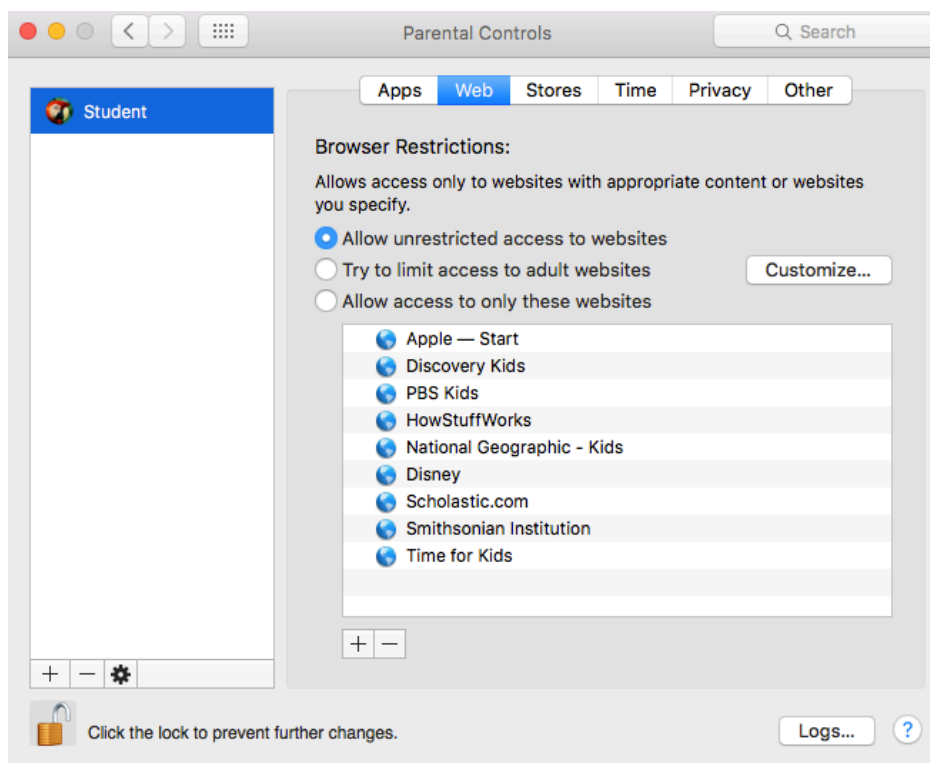

5: Open up system preferences and select "Parental controls" from the menu

6: Select your students account in the menu

7: We strongly suggest setting “allow unrestricted access to the internet” under the web tab. Using the default settings tend to have a lot of false positives.

8: To setup time restriction please select the “Time” tab and set the desired restrictions.
